

BIM Fundamentals, Processes and Procedures

With BIM processes becoming increasingly important, BIM training is essential for getting up to speed without missing out on valuable opportunities.

This BIM training course is designed to provide delegates with an understanding of the principles of BIM Level 2. Delegates will also review all BIM Level 2 standards, specifications and guidance and develop an understanding of how information should be managed, delivered and used through the capital, delivery and into occupation. Those attending this BIM training course will learn how to take a critical review of key documentation and ultimately have a better understanding and increased ability to manage BIM processes.

This BIM course is fully CPD Accredited. The content has been certified by the CPD Certification Service as conforming to continuing professional development principles. Certificate number A006241 (April 2017).

"Our instructor provided us with an excellent course. He brought levity to the occasion with his dry wit and droll sense of humour. The instruction he gave was clear and well-paced. An old hand with much experience, which he brought to bear throughout the course duration. Thanks!" - Chris D.

Prerequisites

Those considering this BIM training course should have a good understanding of the basic principles of BIM and the UK Government Strategy.

Objectives

BIM Level 2 process requirements

Synopsis of the core BIM related standards & applicability

Summary of the CIC suite of documents & how they relate to BIM
