

ISO 19650 Interactive Workshop - from Theory to Practice

The release of ISO 19650 is a significant step forward for the Construction industry. High quality information management is at the heart of the transformation which is so desperately required and this workshop aims to give delegates the practical experience and skills necessary in order to start applying international best practice on new projects.

This one-day workshop will span the gap between theory and practice, giving delegates exposure to real world applications of ISO 19650. Across the day, a number of breakout sessions will run where different scenarios and situations will be explored and walked through – the aim being to close the gap and give delegates the confidence to apply the ISO within their own organisations.

So, if you have listened to the theory but feel you need further support before you can lead your organisation or project around the ISO then this workshop is for you. It's all about practical skills, helping early adopters take advantage of their interest in, and commitment to, world class information management.

Our principal consultant, Daryn Fitz, will be moderating and delivering this training workshop aimed at organisations and individuals responsible for: implementing BIM strategy, managing the change from PAS 1192 to ISO 19650 and/or implementing ISO 19650 at a practical level.

London - 8th November 2019, Great George Street

Prerequisites

Delegates will be asked to complete some pre-work before the event, this will be questionnaire and spreadsheet based and not require more than 30 minutes. The results will be consolidated and shared during the day to aide discussion.

Objectives

An Introduction to ISO 19650

Comparison between PAS 1192 and ISO 19650
