

IT Services for the Construction Sector

Get the performance you want consistently, confidently and continuously

**find your way
around the network**

The intricate pattern of the common spiders web is woven in less than a day and has tensile strength higher than steel and far greater elasticity

Get your IT right, from the start

Depend on best in class IT infrastructure

Working with huge volumes of design and visualisation data puts exceptional demands on any construction organisation's technology. You need your systems and equipment to work hard and consistently; supporting your core business effortlessly.

You also want your network to function efficiently and multiple offices to share files without sharing headaches. Above all, you need to know that if systems fail, the business doesn't, so you need robust and reliable disaster recovery procedures that provide continuity you can depend on.

Excitech makes IT do what you need it to do

From health-checks to installations: Excitech delivers tailored IT Solutions for the construction industry

Performance is about making sure that servers, back-up, disaster recovery, networking and workstation performance form part of one orchestrated whole; an IT entity that reflects and enhances your business's unique operational requirements.

Branch offices, site offices, home and mobile users all depend on a robust core for uninterrupted access to systems, files, and applications.

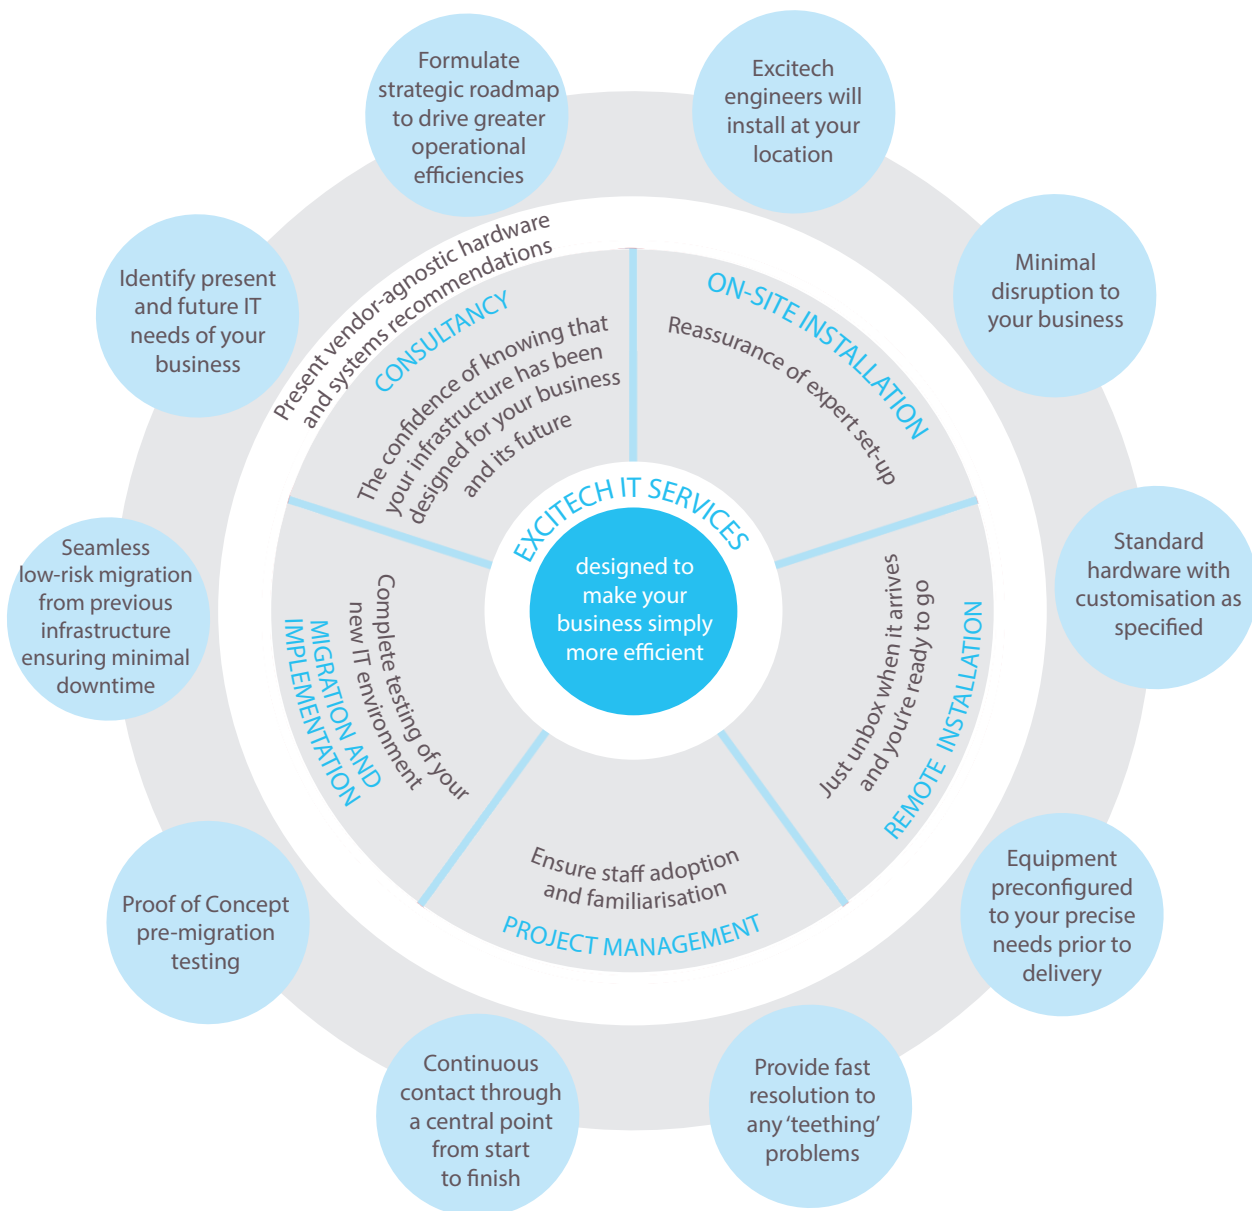

Excitech's engineers bring insights to help address your needs based on working with construction sector leaders time and time again. Our services support the entire lifecycle of your IT software and hardware. We offer initial health-checks of your infrastructure to see that you're optimising the latest and smartest resources available, through to bespoke configuration and installation services.

Excitech IT solutions at a glance

Excitech IT Services provide architects, engineers, and construction professionals with everything they need to get the most appropriate systems and hardware designed, configured, and put in place to keep them in control and in front.

- Consultancy

What our customers say about us...

Kenji Matthews - Stephen George + Partners LLP

SGP

“The solution offered met exactly what we needed; that’s what swung it Excitech’s way”.

One complete IT infrastructure from beginning to end - from design to installation; Improving performance and productivity - Stephen George + Partners LLP

- **Better performance** - Excitech started from scratch to design an infrastructure fit for the modern age and the competitive arena of architecture.
- **Robust disaster recovery** - In addition to a new server infrastructure with better performance, capacity and flexibility Excitech put in place enhanced data back-up and recovery capabilities such that one office could serve as backup and disaster recovery for another; reducing the risk of business disruption.
- **Remote working** - On top of the IT backbone Excitech overlaid a remote working environment and updated internet bandwidth in all the firm’s offices.

Excitech IT Solutions enable companies in the construction sector to run their businesses effectively and efficiently in a challenging and competitive market.

Leveraging 30 years' construction knowledge Excitech IT Solutions combines best in breed technologies and best practice operations with a low-risk approach to supply tailored solutions that achieve demanding operational requirements.

A long track record of creating mutually beneficial relationships with some of the UK's most innovative construction organisations is proof of both our capability to perform for our clients and commitment to the industry.
